

TaskWA

free · self-hosted · open source (MIT)

Your team already lives on WhatsApp. Now their tasks do too.

Each morning everyone gets their task list on WhatsApp. They reply to a task — done, in progress, or blocked — and you see it instantly.

No app to install. No logins. Just WhatsApp.

■ One digest, every morning

Each person gets a numbered list of their open tasks - by direct message or team group.

■ The reply is the update

Reply 1 done, 1 in progress, or 1 block with a reason - or swipe-reply "done".

■ Create tasks in the chat

/add Fix pump @Ravi fri !high - assignee, due date, priority, one line.

■ Blockers reach you instantly

When someone replies "block", you're alerted at once - reason on record.

■ Your computer, your data

Runs on a computer you own, not the cloud. No monthly or per-message fees.

■ Built for small teams

Simple dashboard, full history, nightly backups, one-click spreadsheet export.

No coding. Let AI set it up with you.

Live in ~30 minutes.

Paste this prompt into ChatGPT, Claude, or any AI assistant — it walks you through the whole install, one step at a time.

```
Help me install TaskWA on my computer. First, ask me what computer I use (Mac, Windows, or Linux). I'm not technical, so explain each step simply, give me one step at a time, and wait for me to confirm before the next one. Help me fix any errors. Here's everything about it:
